

THE MACHINE ECONOMY NEEDS A CHECKOUT

WorxAI Protocol

The x402-powered data marketplace where autonomous agents discover, verify, pay for, and consume trusted data.

**Humans browse websites.
Agents buy outcomes.**

THE PROBLEM

AI agents can reason. They still cannot buy clean data.

DISCOVERY IS FRAGMENTED

Useful datasets hide behind dashboards, sales forms, and one-off integrations.

PAYMENT IS HUMAN-SHAPED

Invoices, accounts, and checkout flows break autonomous execution.

TRUST IS UNDERSPECIFIED

Agents need provenance, schemas, freshness, and delivery guarantees before spending.

THE PROTOCOL

Data in. USDC out.

WorxAI turns data access into a programmable transaction using x402 and Base settlement rails.

x402

HTTP-native payments
for the next generation
of software buyers.

THE FLYWHEEL

More data creates more agents.

PROVIDERS

Monetize specialized datasets with machine-readable access.

AGENTS

Purchase exactly what a task needs without human intervention.

PARTNERS

Bring rails, distribution, identity, and infrastructure.

The best API is the one an agent can discover and pay for itself.

PARTNERSHIP MEME

Stop selling

**“Can your API
accept x402?”**

Make your data legible to agents, payable by protocol,
and measurable from first request to settlement.

EVERY AGENT, EVENTUALLY

WHO SHOULD BUILD WITH US

The rails are ready. The datasets are next.

- 01 Base / Coinbase — settlement and agent distribution
- 02 Circle — USDC and programmable treasury
- 03 Vercel / Neon — agent infrastructure and data backends
- 04 LangChain / LlamaIndex — discovery inside agent workflows
- 05 Specialized providers — financial, geospatial, research, and IoT data

HOW IT WORKS

From request to settlement in seconds.

01 DISCOVER

Agent finds a dataset or endpoint.

02 VERIFY

Schema, provenance, and price are clear.

03 PAY

x402 authorizes USDC on Base.

04 DELIVER

WorxAI verifies and returns data.

PARTNERSHIP FIT

A focused pilot, measurable value.

We are looking for high-quality datasets with clear provenance, commercial rights, useful freshness, and an agent-facing use case.

PILOT INPUTS

Anonymized schema / sample records / update cadence

Licensing terms / quality signals / access requirements

THE ASK

Bring one valuable dataset. We bring the machine buyers.

Partner with WorxAI Protocol to make your data discoverable, verifiable, and purchasable by autonomous software.

WorxAI Protocol

Infrastructure for the data economy agents can actually use.
